Education

Mallabhum Institute of Techonology, Bishnupur,Bankura **2024**

B.Tech in Computer Science and Engineering, **GPA :** 7.89

Project

Roommates Link GitHub

Technologies : HTML/CSS, JavaScript, react, Appwrite

Descriptions : Developed a room rent finder web application called "Roommates" using React and JavaScript, integrated with Appwrite for backend services. The application facilitates seamless searching and renting of rooms, offering users features such as advanced filtering options, user authentication, and real-time database interactions. Implemented a responsive design to enhance user experience across various devices. Collaborated on the project to ensure efficient performance and maintainability, contributing to both the frontend and backend development processes. This project demonstrates my ability to create functional, user-friendly web applications and effectively utilize modern web technologies.

Weather Application Link GitHub

Technologies : HTML/CSS, JavaScript, API

Descriptions : Designed and developed a dynamic weather application using HTML, CSS, and JavaScript, utilizing third-party APIs for real-time weather data retrieval. The application allows users to search for current weather conditions and forecasts based on their location. Implemented responsive design principles to ensure usability across various devices and screen sizes. Focused on enhancing user experience through intuitive navigation and visually appealing layouts. This project showcases my skills in frontend development, API integration, and creating interactive web applications.

Tik-Tac-Toe Link GitHub

Technologies : HTML/CSS, JavaScript, React

Descriptions : Developed a classic Tic-Tac-Toe game using React and JavaScript, focusing on building an interactive user interface and implementing game logic. The application allows users to play against each other, featuring real-time updates and win condition checks. Leveraged React's state management to efficiently handle game state and user interactions. Designed a responsive layout to ensure compatibility across various devices. This project highlights my proficiency in React, component-based architecture, and my ability to create engaging and functional web applications.

Technical Skill

- **Programming Language :** C**,** C++ , java, JavaScript , MySQL
- **Technologies :** React , Node.js , Express.js, MongoDB, Git , GitHub

Achievements

- Achieved first position in the coding competition at Pulse 2024, the annual college fest of Mallabhum Institute of Technology.
- Solve 50+ problem on Heackerrank ,Solved 25+ problem on leetcode
